

Institute on Place and Wellbeing

The University of Arizona Institute on Place and Wellbeing

Mission:

The University of Arizona Institute on Place and Wellbeing (IPW) leverages knowledge and evidence through research and design to achieve tangible results optimizing and maximizing people's productivity, creativity, and wellbeing from employer and consumer perspectives.

The IPW is a unique partnership at the University of Arizona between the Arizona Center for Integrative Medicine, the College of Medicine – Tucson, and the College of Architecture, Planning and Landscape Architecture, actualizing the university's commitment to a vision of human health that fully encompasses the role of the built and natural environment in health, wellbeing and healing. We focus, to this end, on research, education, practice, and policy change.

Institute on Place and Wellbeing

The IPW's multi-disciplinary team carries out research to quantify stress, health, and wellbeing outcomes in real-time and real place, in built environments including office spaces and healthcare facilities. State-of-the-art technologies such as non-invasive micro-devices and analytic algorithms developed at UA collect data used to help occupants and employers maximize health and wellbeing, creativity, and productivity in optimized work environments.

Supporting improvement through economic analyses, we then help organizations calculate return on investment of interventions that support sustainable human health and wellbeing.
